On-scene Command Support System

This system collects, organizes, and visualizes realtime information from fire scenes, supporting command operations with AI-assisted decisionmaking.

It processes the gathered data and delivers key information to various devices to aid firefighting command.

By linking safety monitoring, triage, casualty tracking, vehicle management, AI analysis, and building data, it proposes optimal firefighting operations for future society.

The system is installed in an electric command vehicle and can also be operated via a mobile command console with large touch panels, enhancing on-site command capabilities.

YoY comment

- Consolidated performance is forecasted to reach record high both sales and operating profit due to high order backlog.
- ✓ The FFV business is forecasted to remain steady. Bronto is expected to remain steady, having recovered in the previous year. Domestic sales are forecasted to increase, and orders with delivery dates exceeding the fiscal year are expected to continue and be carryover to the next fiscal year.
- The FPES business is forecasted to remain at the second highest level on record, despite a reactionary decrease following large projects for fire suppression systems recorded in the previous fiscal year.
- The RM business and The ECV business are forecasted to remain steady due to a record-high level of order backlog.
